

## OX-B431/OX-B431+ Oxidising Gas Sensor – Ozone + Nitrogen Dioxide

The OX-B431 sensor is a PPB sensor that is designed for environmental air quality applications with best-in-class baseline stability. This product is available in our standard format (OX-B431) and with our patented Integrated Smart Technology (OX-B431+) that has an IST board with a memory chip and temperature sensor integrated in the sensor. The + sensors store specific calibration, specification, and identification data on every sensor allowing plug and play operation. The on-board temperature sensor improves the accuracy and simplicity of temperature compensation algorithms.

Use of Alphasense ISB circuit reduces noise to 15ppb, with the opportunity of digital smoothing to reduce noise even further.

Offset voltage is due to intentional ISB circuit electronic offset.

## Sensor Data - NO<sub>2</sub>

The OX-B431 detects both ozone and nitrogen dioxide (O<sub>3</sub> + NO<sub>2</sub>). The NO2-B43F measures only nitrogen dioxide, filtering out ozone. Using these sensors together allows you to calculate the O<sub>3</sub> concentration by subtracting the corrected NO2-B43F concentration from the corrected OX-B431 concentration.

Before subtracting to determine ozone concentration, ensure that the signals from the two sensors have been corrected for electronic zero offset, sensor zero offset and temperature dependence, and sensitivity (nA/ppm) calibration and temperature dependence.
