

Dual Sensor Carbon Monoxide – Hydrogen Sulfide – Miniature Size

Introduction

The world wide use of multigas, portable, personal safety monitors has grown since the 1970s to include an ever-increasing number of industries. The one requirement in common to the majority of these instruments is the need to measure both Carbon Monoxide and Hydrogen Sulfide simultaneously.

Alphasense now offers a compact, dual gas sensor which allows designers to reduce significantly instrument size and cost. The D2 sensor provides a unique approach to the dual gas sensor in both its size and working electrode configuration. The use of a high-capacity filter over the Carbon Monoxide working electrode eliminates Hydrogen Sulfide cross sensitivity to Carbon Monoxide.

Proven in the field over many years, these sensors perform well even under long-term, challenging conditions.

Figure 6 Ambient Long-term Test Results

Figure 6 shows good long-term stability to H₂S for the D2 sensor.

Sensors were tested monthly and stored at ambient laboratory conditions.

Note: Above 85% rh and 40°C a maximum continuous exposure period of 10 days is warranted. Where such exposure occurs the sensor will recover normal electrolyte volumes, when allowed to rest at lower %rh and temperature levels for several days.
